

Ateliers Romeo

Wood and Stone joinery for design and architecture

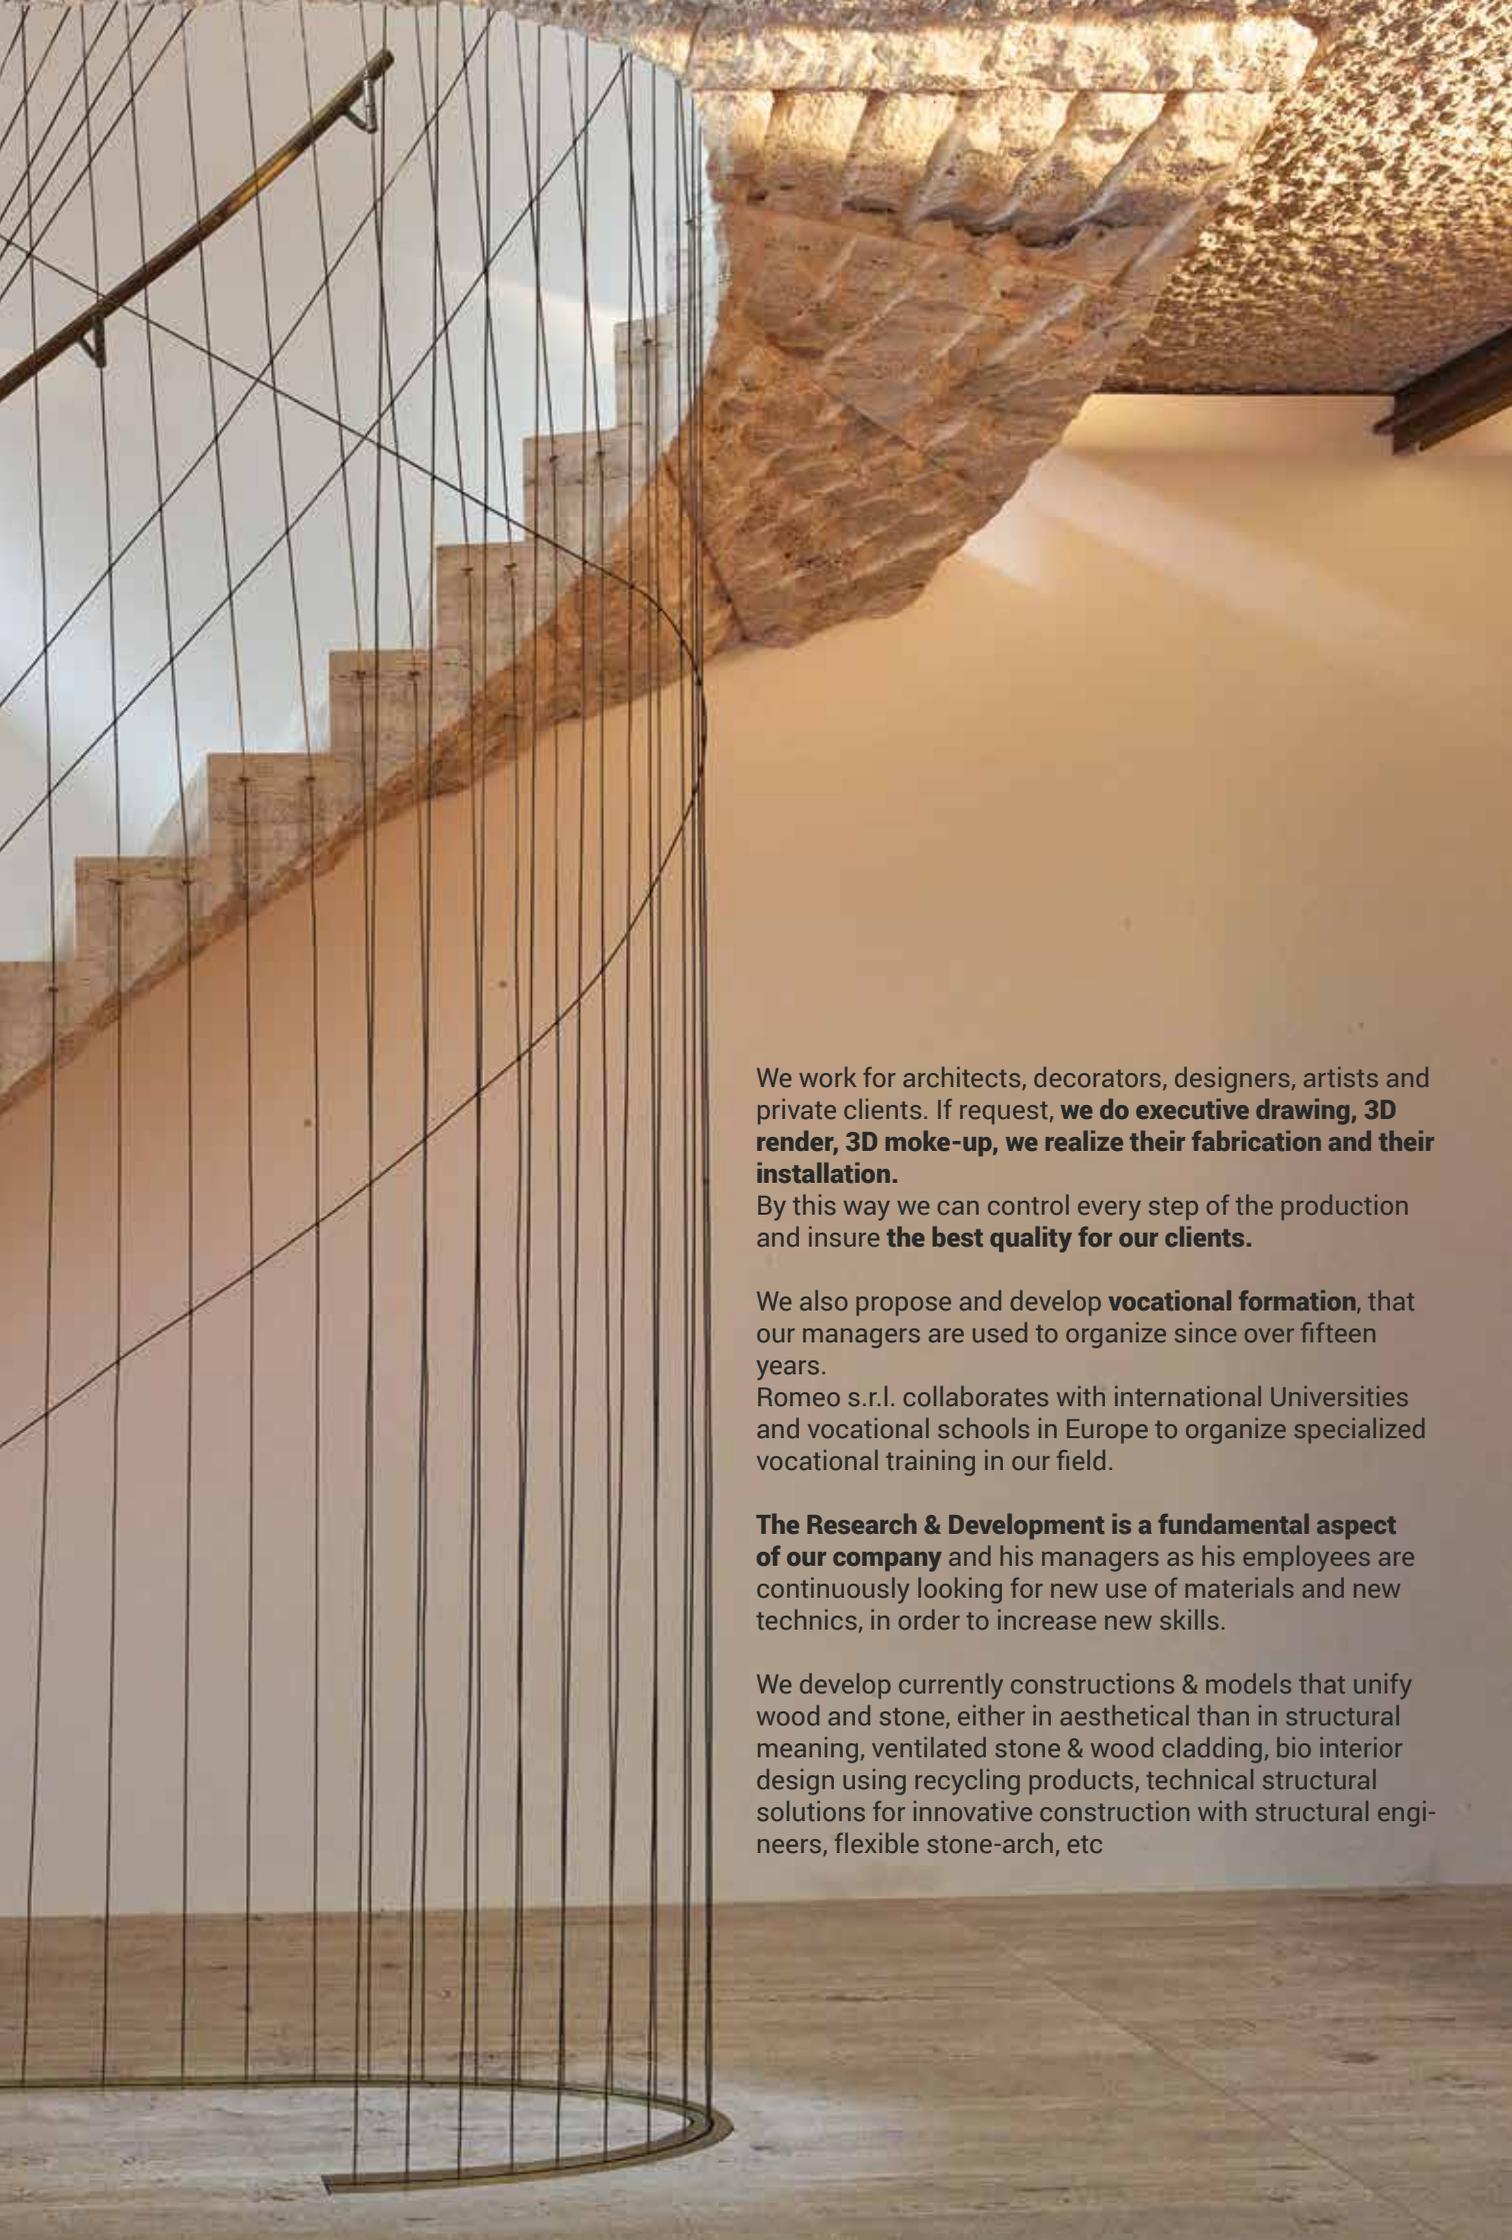

The company, founded in 2013 by 3 associates, enjoys modern and spacious working space in Trani, in south Italy, near Bari.

Romeo s.r.l. is an **innovative Italian start-up company of stone construction and wood joinery**, working either in **traditional & historical buildings** or on **new constructive concepts**.

In a cross-curricular meaning Romeo is composed by experienced cabinetmaker, joiner, stonemason, bricklayer and restorer in the same company.

We have expertise in innovative and traditional stone construction, bricklaying, joinery, ventilated cladding solutions for energy efficient buildings, vocational formation & monuments restoration.

We work for architects, decorators, designers, artists and private clients. If request, **we do executive drawing, 3D render, 3D make-up, we realize their fabrication and their installation.**

By this way we can control every step of the production and insure **the best quality for our clients.**

We also propose and develop **vocational formation**, that our managers are used to organize since over fifteen years.

Romeo s.r.l. collaborates with international Universities and vocational schools in Europe to organize specialized vocational training in our field.

The Research & Development is a fundamental aspect of our company and his managers as his employees are continuously looking for new use of materials and new technics, in order to increase new skills.

We develop currently constructions & models that unify wood and stone, either in aesthetical than in structural meaning, ventilated stone & wood cladding, bio interior design using recycling products, technical structural solutions for innovative construction with structural engineers, flexible stone-arch, etc

ETHICAL CODE, ETHICAL BUSINESS

**The productive process is carried out with the
utmost ecological respect :**

Green energy

Solar panels

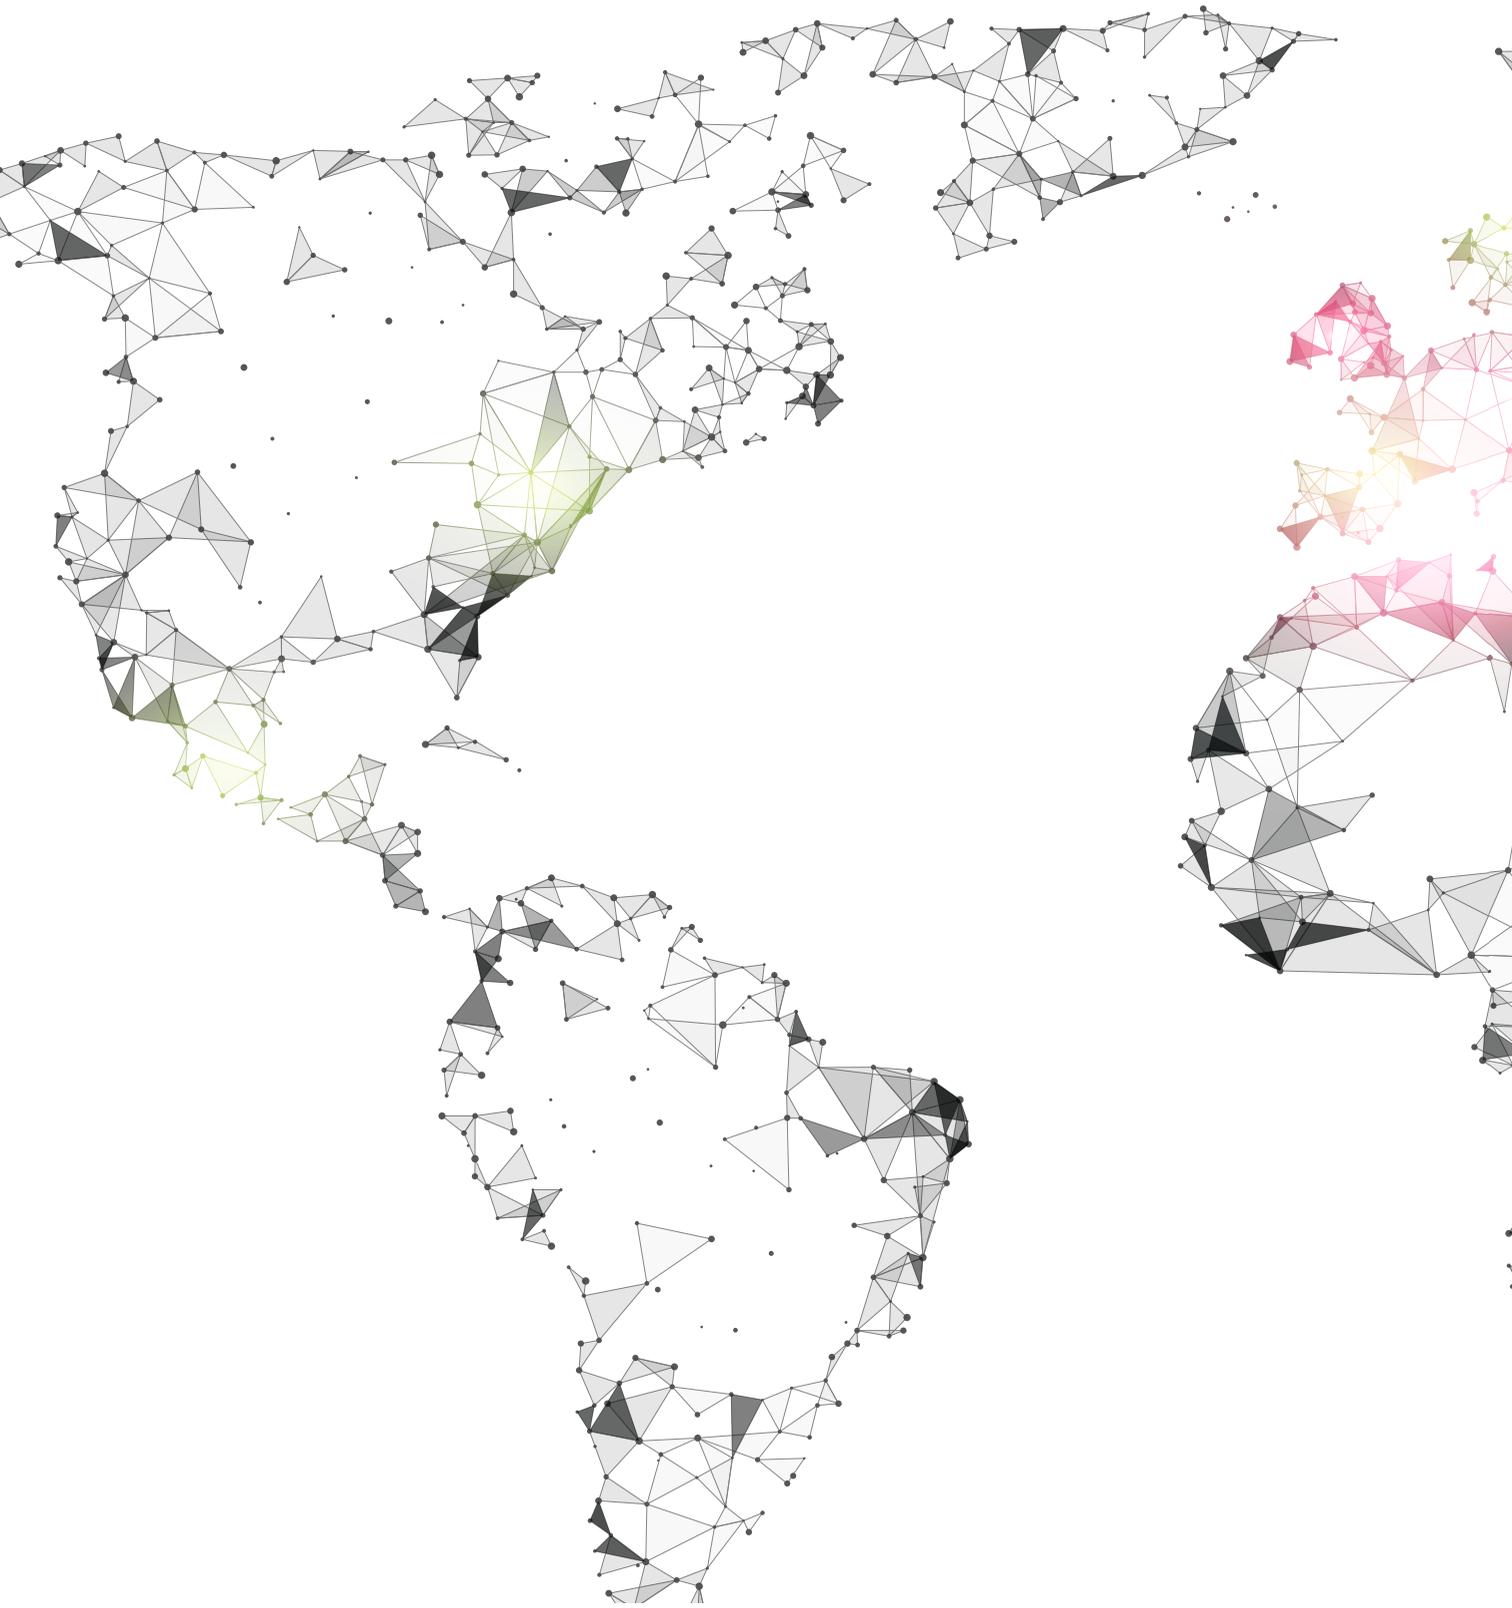

Water recycling and intern purification system.

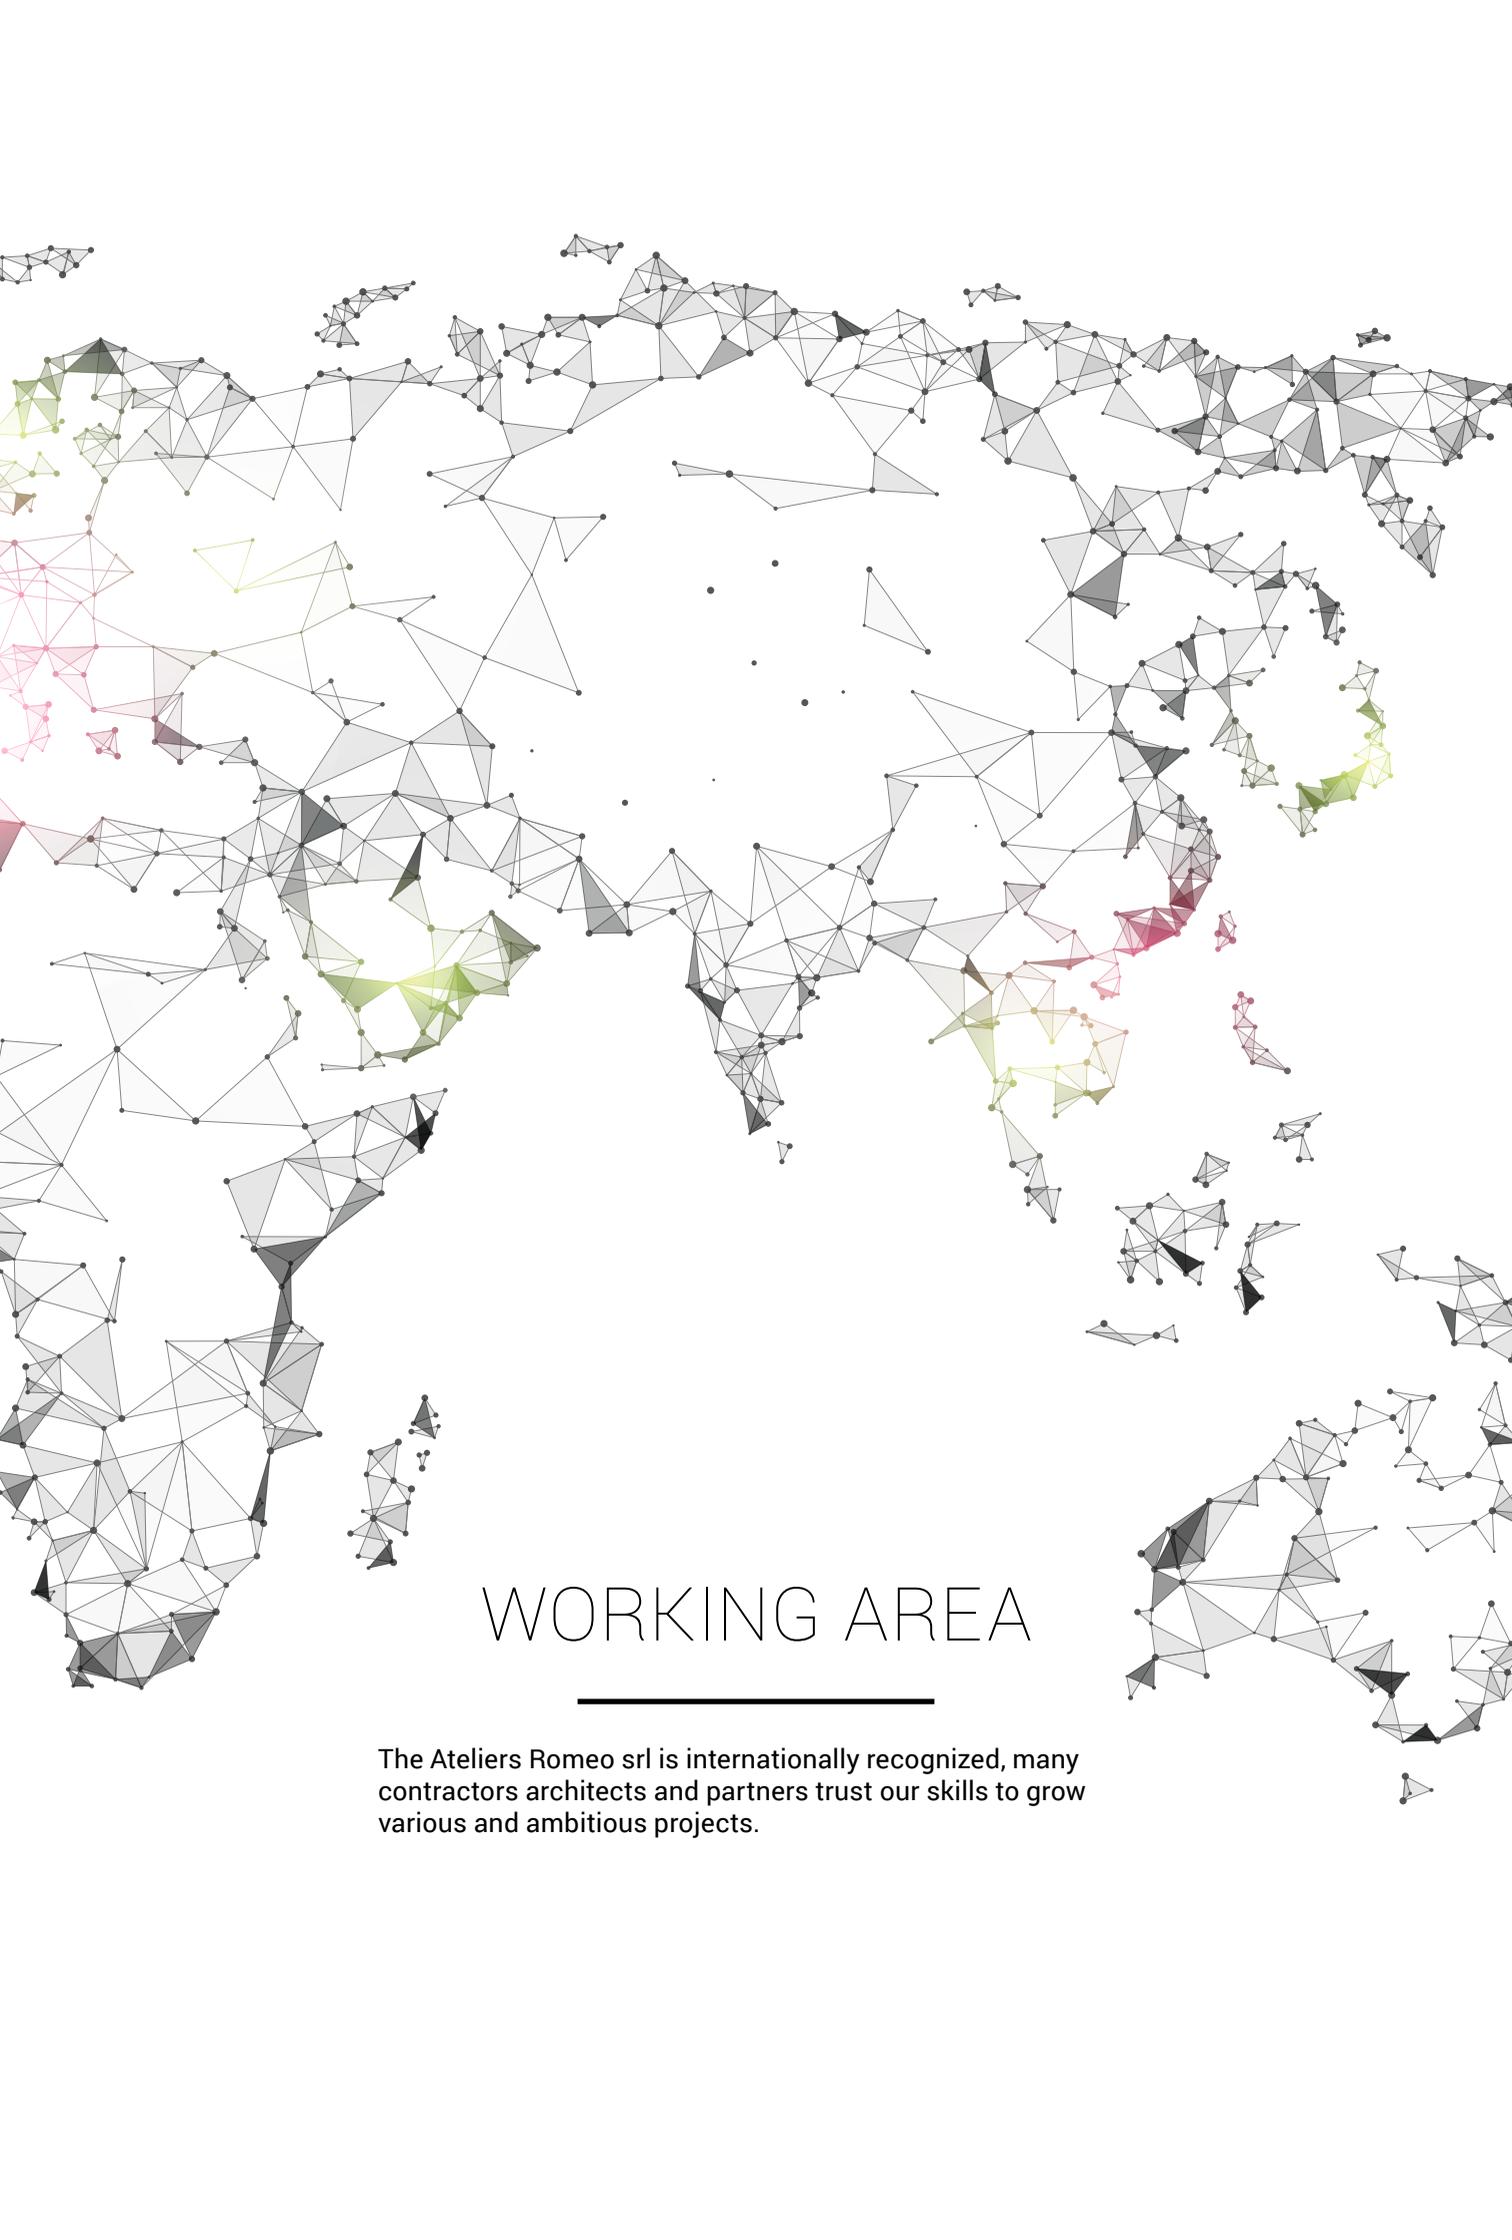

Wood recycling for private fire place.

Waste management by differential garbage.

We carefully evaluate the customers requirement, and ensure that the consultative approach to each of them is always in line with our quality standards.

WORKING AREA

The Ateliers Romeo srl is internationally recognized, many contractors architects and partners trust our skills to grow various and ambitious projects.

MATERIALS

A great attention and care are dedicated to the materials selection.

We have continuous updates of new materials : warm wood, quarry and partners.

All technical informations are transferred to our data base, to be ready to work with engineers and laboratories.

This methodology assure that customers choices are the result of an accurate and technical assessment.

Ateliers Romeo grow up very strong relationships with a powerful network of suppliers, that help to touch any kind of wood and stone in the world.

SERVICES

We guarantee the dedicated transportation and we produce crates for the packing of all our works.

Our production can be updated in order to be very honest with the process and the skills we will use for any clients. The Ateliers Romeo have the possibility to use traditional skills and also with CNC cutting machine.

We've already been working on DWG and 3DM softwares, STL for 3D printing and CadCam software to work with CNC machine.

QUALITY

Our target is to provide the highest quality.

Our target is to provide the highest quality. To achieve excellent results, we dedicate the utmost care in selecting each single material, and we make sure that they are in accordance with the specifications of the projects.

The constant training helped by an intern training center for cabinet-making and stone masonry and the ambitious projects we have done, derive on a high demand for quality and particular skills from each professional.

This particularity was necessary to create our high quality manufactured product.

Furthermore, we satisfy the customer's needs and requests in a short period of time and with a particular focus on budget control thanks to a constant increase in production efficiency.

INNOVATION

Our start-up is based on the innovation of structures, materials and process.

From the early beginning we have always dedicated a big part of our activity to the research in stone and wood production to be in a continuous access to the benefits of cutting-edge technology.

Nowadays, it's the only possibility we have to give the best answer to any ambitious project.

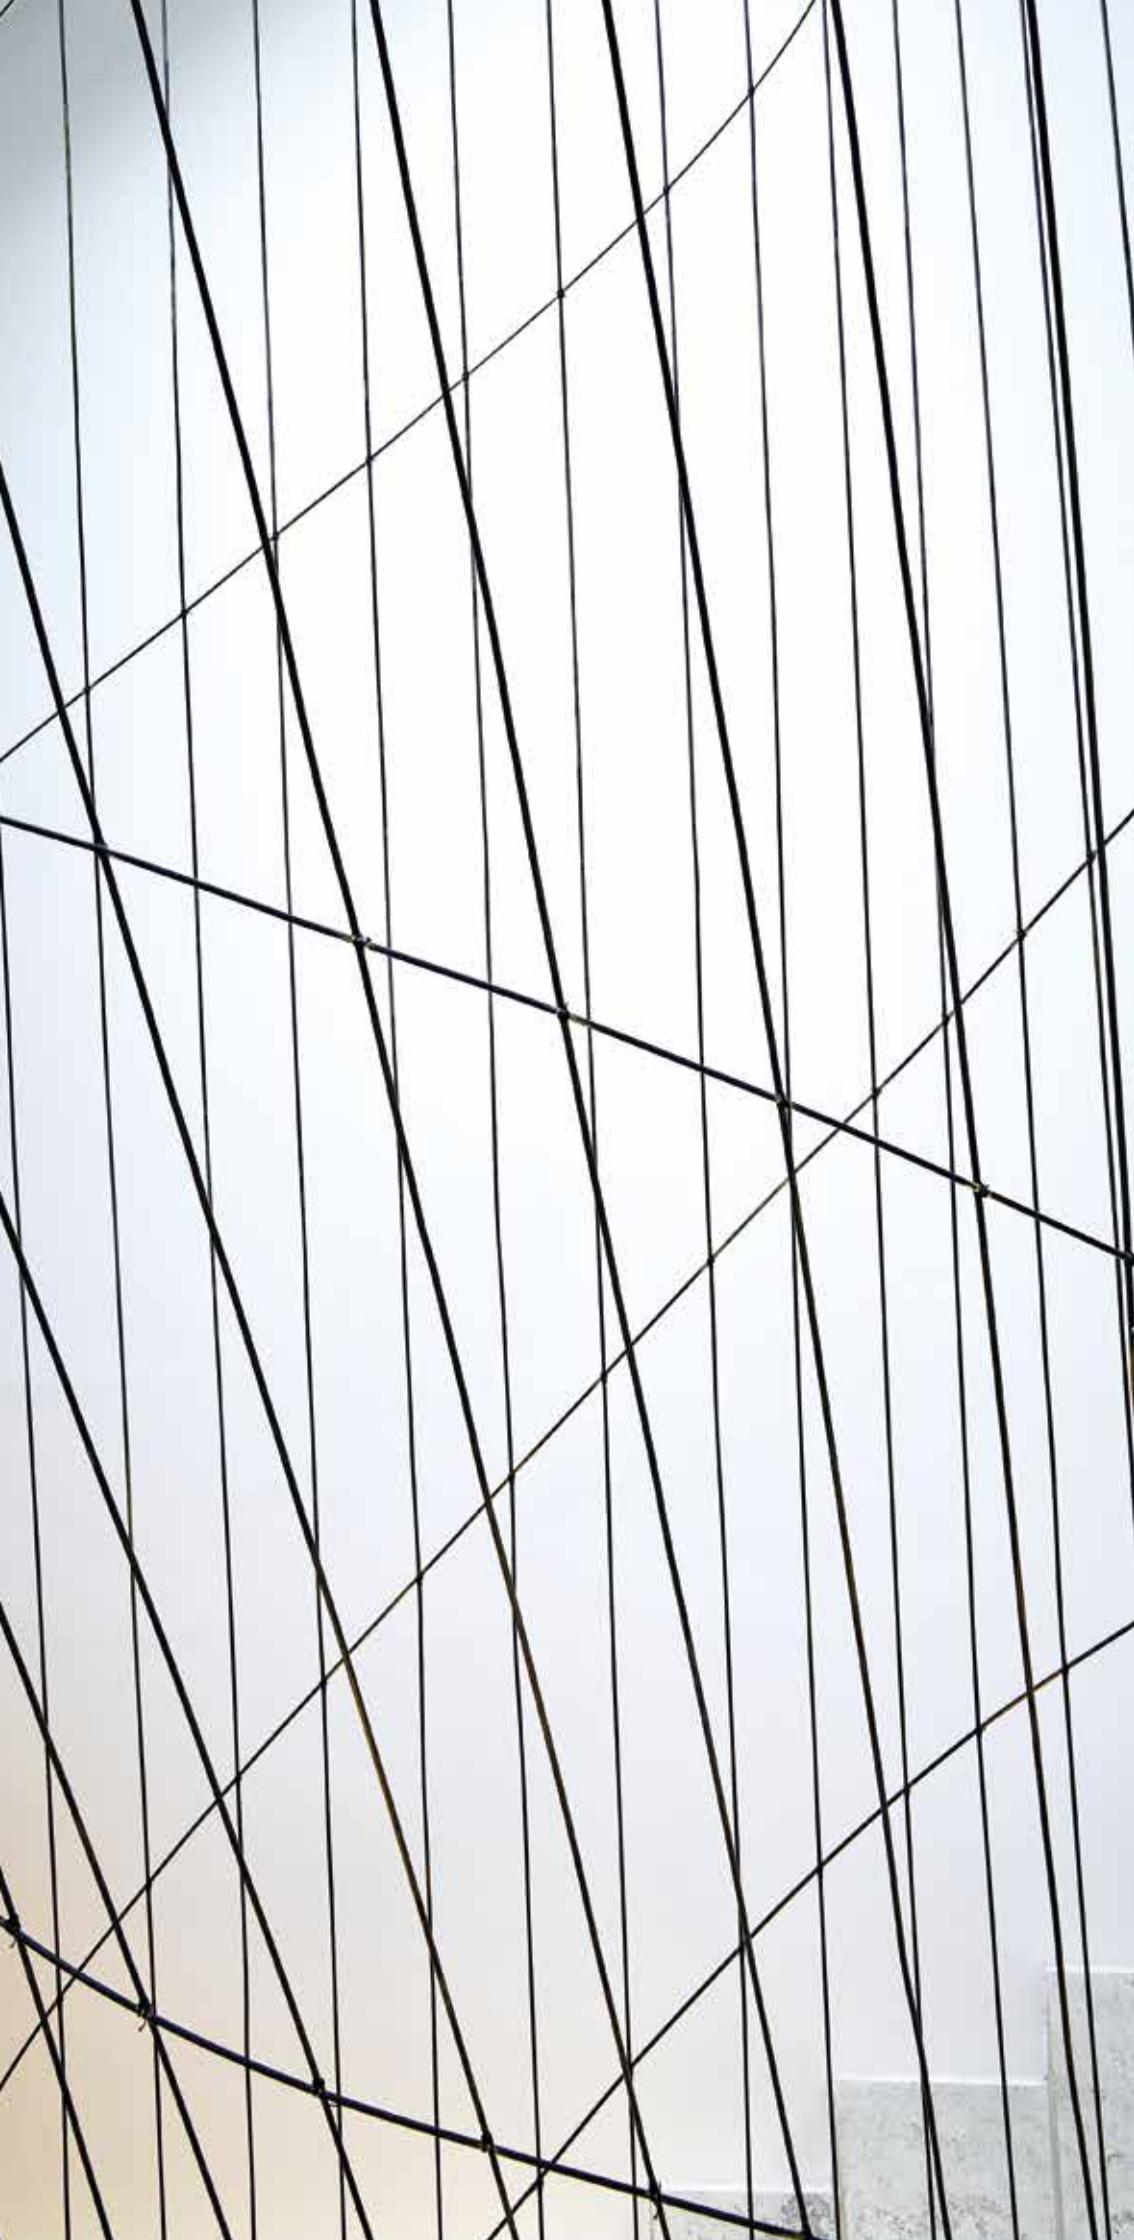

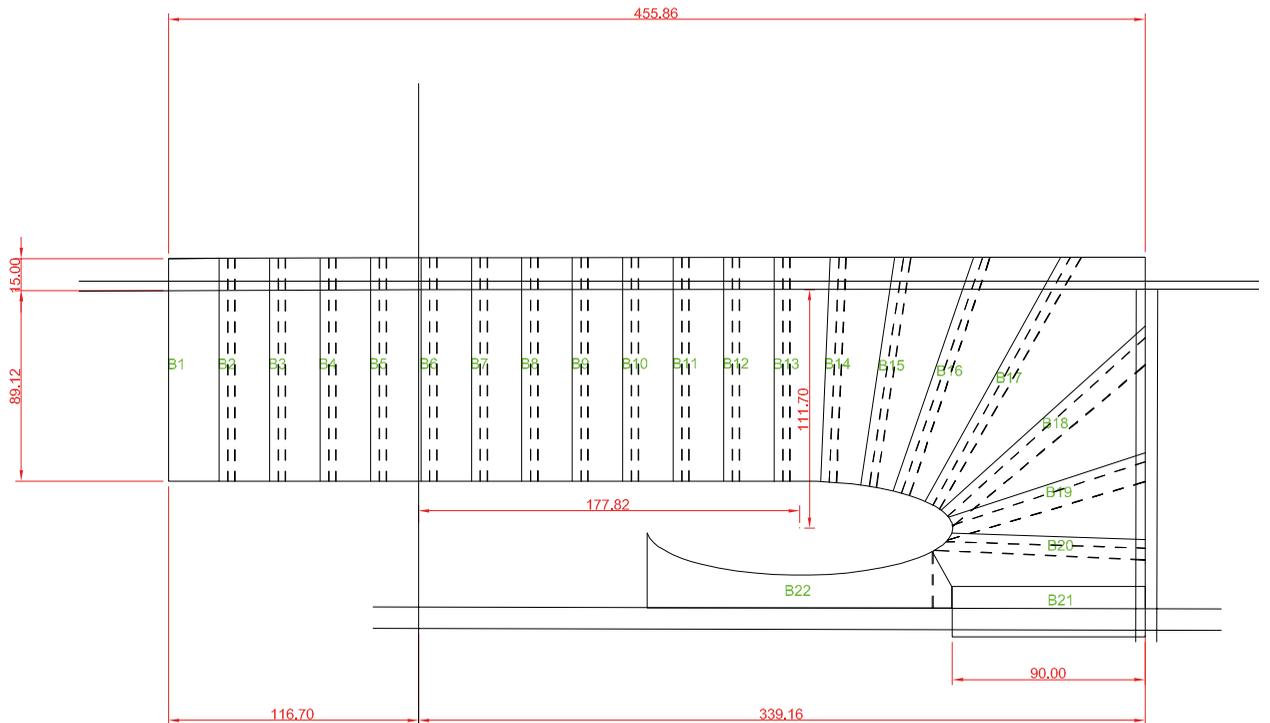

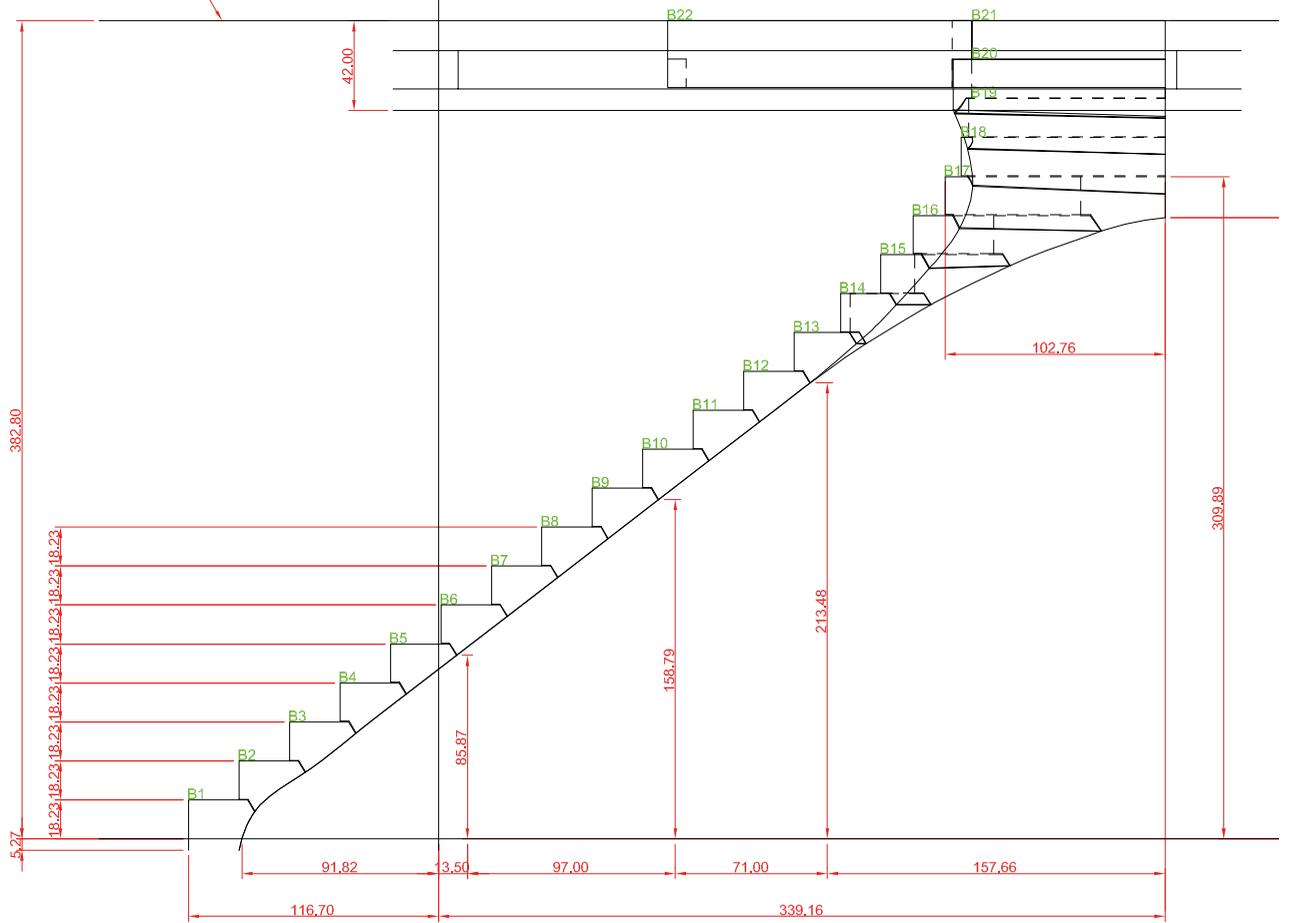

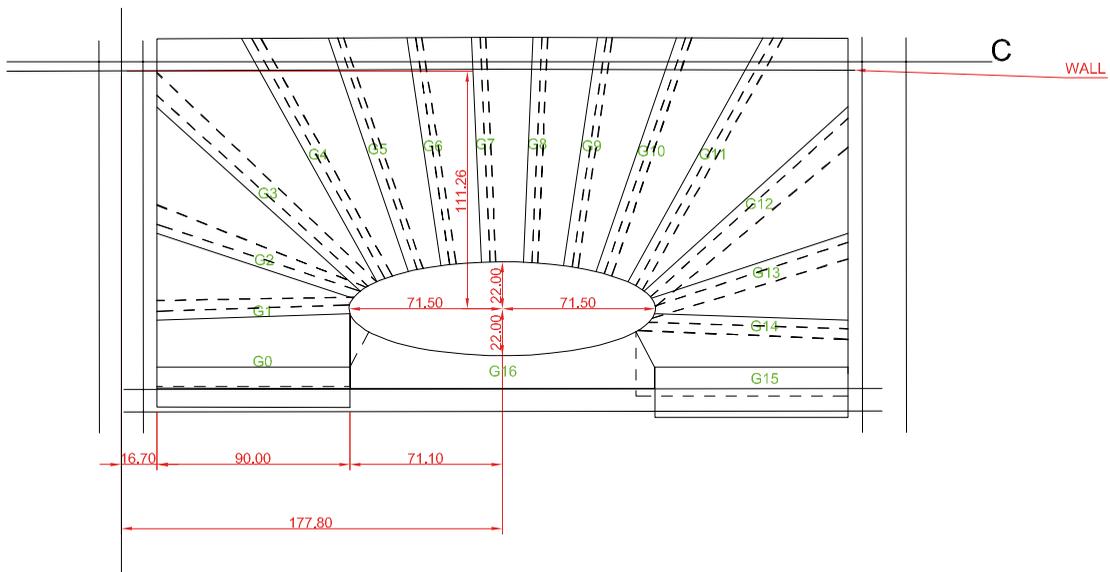

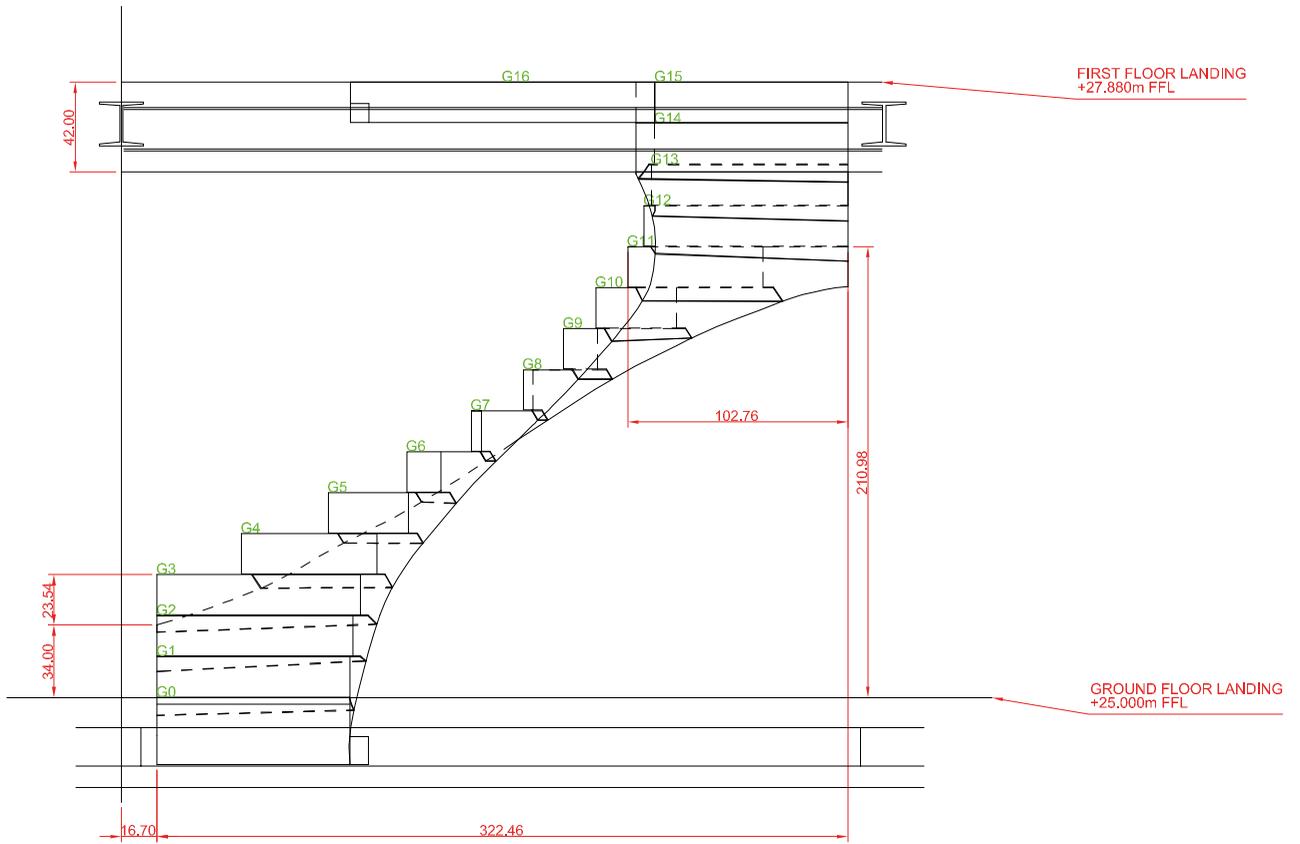

GL4

Romeo s.r.l realize technical drawings for all his production if request. We work with structural engineers able to answer to european, american and british standards. CAD drawings, 3D renders, models, prototypes can be realized.
